Welcome to Neurodesk!

Instructions for use on Mac:

Drag the workflow file 'run-neurodesktop-mac' to your desktop

Make sure Docker is installed and running!! (Look for the icon in the top bar).

Open the workflow file called 'run-neurodesktop-mac'

Press the 'run' arrow at the top right of the screen

When prompted for the location to create a folder - please select your Desktop as the location. Please leave the folder name as neurodesktop-storage.

NB - if you select another location, the app will not work. If you wish to select another location, please see the instructions on the website neurodesk.org

If prompted, allow Git to be installed (approx 2 minutes).

Please wait for the install in terminal, when it is finished, safari will open with Neurodesktop. Please select the 'Desktop Auto-Resolution (RDP) option.

Your local data in 'neurodesktop-storage' on your Desktop will be linked to the 'storage' folder in Neurodesktop.
